A fast website your customers can find.

Ilefoastro Web builds simple, mobile-friendly websites for local businesses, with the search basics set up properly.

Example search result

Mama Bisi Bakery | Fresh bread and pastries

mamabisibakery.example

Daily bread, cakes and small chops. See our menu, opening hours and how to order.

A clear title and description, like this, help customers see what you offer before they click.

What you get

- **A lightweight website.** It loads quickly and reads well on any phone.
- **Search basics done right.** Clear page titles and descriptions, correct business details, and help setting up your Google Business Profile.
- **Easy updates.** Your site is stored in a version-controlled repository, so a change to a price or a line of text goes live within minutes.

How it works

1. You tell me about your business: what you sell, where you are and how customers reach you.
2. I build the site and show it to you before it goes live.
3. It goes live, and I make changes whenever you need them.

What I can't promise

> Nobody can promise a Google ranking. A fast site with correct details gives customers a better chance of finding you, and results build over time.

Get in touch

Send a message and I'll reply with how your business currently shows up on Google and what I'd change.
